

Reusable Silicone Vacuum Bags For EVA Glass Laminating Machine

Silicone Vacuum Bag is a long life and reusable product. It is made up of superior silicone rubber sheet used for laminating glass, so it is also called glass silicone vacuum bag or reusable silicone vacuum bag. It is highly essential in glass lamination. It is very important for pump the air between the EVA film and glass with vacuum machine. Make sure NO AIR in bag. It could be prevented gum spilled on the machine. High-quality silicone vacuum bags can effectively reduce substandard product waste.

Each bag is a combination of assembled parts with glue-bonding.

- Upper Silicone Sheet
- Down Silicone Sheet
- Edge Gear (silicone sealing strips)
- Silicone Tubes
- Silicone Nozzles

Standard dimensions

Material thickness: 3mm, 2mm

Width * Length: On request

*** Before quoting, please let us know your Max Glass Size, as we want to get your real working area.**

Technical Data

Material	100% Silicone
Color	Translucent and Blue
Surface	Textured/Smooth
Tensile Strength	9.5MPa
Tearing Strength	32N/mm
Material Hardness	50±5 Shore A
Elongation at Tear	650%
Compression set	≤8%
Max. Temperature	250°C (482° F)
Maximum Glass Width	3300mm (130")
Maximum Glass Length	no limits
Silicone Thickness	3mm (0.12")
Thickness Tolerance	± 0.4mm (0.016")
